

## Why invest in an Energy Star home?

Homes that earn the Energy Star label must perform at least 15% better than homes that meet the 2004 International Residential Code. At Remington Custom Homes, we strive to produce homes that perform at least 50% better than the 2004 IRC. This means that our homes provide significantly better quality, increased homeowner comfort, and most importantly lower energy costs.

Many steps must be taken to earn the Energy Star label. Every home plan is computer analyzed to ensure it will meet the requirements. Then, every step during construction is tweaked to provide maximum energy savings. These improvements include:

- \* **Advanced Framing** techniques and materials are used to ensure Insulation is used to its maximum potential.
- \* **Insulation** is inspected by a third party rater to make sure it complies with Energy Star standards
- \* **HVAC** equipment is more efficient, and all ducts are more heavily insulated than required by the 2004 IRC.
- \* **Testing** performed by a third party rater verifies that every home meets or exceeds requirements for air leakage and duct tightness.

Remington Custom Homes is a 100% Energy Star Builder  
(Including custom homes!)
